

**CALIFORNIA STATE SCIENCE FAIR
2008 PROJECT SUMMARY**

Name(s) Taryn T. Frazier	Project Number J1114
Project Title What Type of Music Affects My Dog's Mood?	
Objectives/Goals I wanted to know how my dog reacted to all the different types of music. He seemed like kind of an old soul dog and I wanted to know if he really was. Methods/Materials First I took Max onto the porch of my grandma's house and calmed him down. Next, I took the music I had downloaded on my Ipod 2 weeks before the project and played 1 different type of music everyday. After each day I recorded the data. Results Max reacted best to Heavy-Metal,Jazz,and Country. Conclusions/Discussion In conclusion, I learned alot from my project/expirement and I was completely wrong in my hypothesis. I really liked the concept of this project and am definetely going to try something similar to it next year.	
Summary Statement To find out what affected my dog's mood.	
Help Received My dad helped with the set-up of my display board.
