

**CALIFORNIA STATE SCIENCE FAIR
2015 PROJECT SUMMARY**

Name(s) Olivia S. Brdel	Project Number 35302
Project Title Crunch Time	
Abstract Objectives/Goals The main objective of this project was to find out if time pressure affects your ability to complete a task. Another goal was to see patterns between age and gender. Methods/Materials The materials used were a timer, stopwatch, 30 mazes, and 30 male and female participants. Results The result of this experiment was that time pressure actually motivates a person to go faster. Conclusions/Discussion In conclusion my hypothesis was proven incorrect. For further study I would use a different age group and try a different task.	
Summary Statement My project is testing to see if time pressure affects your ability to complete a task.	
Help Received My teacher helped from the idea. My mom helped format documents.
